

OPERACIONES CON SEGMENTOS

Las operaciones con segmentos se realizan con los números que representan sus longitudes.

Ejemplos:

1) Calcular $\overline{AD}$

$$\overline{AD} = 5 + 4 + 3$$

$$\overline{AD} = 12$$

2) Calcular $\overline{PR}$

$$\overline{PR} = 14 - 8$$

$$\overline{PR} = 6$$

PRACTIQUEMOS

1. De la figura. Hallar $\overline{AB}$

2. Hallar el segmento $\overline{PQ}$

3. Calcular el segmento $\overline{BC}$

4. Calcular el segmento $\overline{AD}$

5. Calcular el segmento $\overline{BC}$

6. De la figura mostrada. Hallar $\overline{BD}$

7. Si: $\overline{AB} = \overline{CD} = 5$, hallar: $\overline{BC}$

8. Si $\overline{AB} = \overline{CD} = 8$, hallar: $\overline{BC}$
